

INDIA CYBER VULNERABILITY & EXPLOIT INTELLIGENCE REPORT

Reporting Window:

08 August 2026 - 09 September 2026

Classification:

Open-Source Cyber Threat Intelligence / Vulnerability Research

Executive Summary

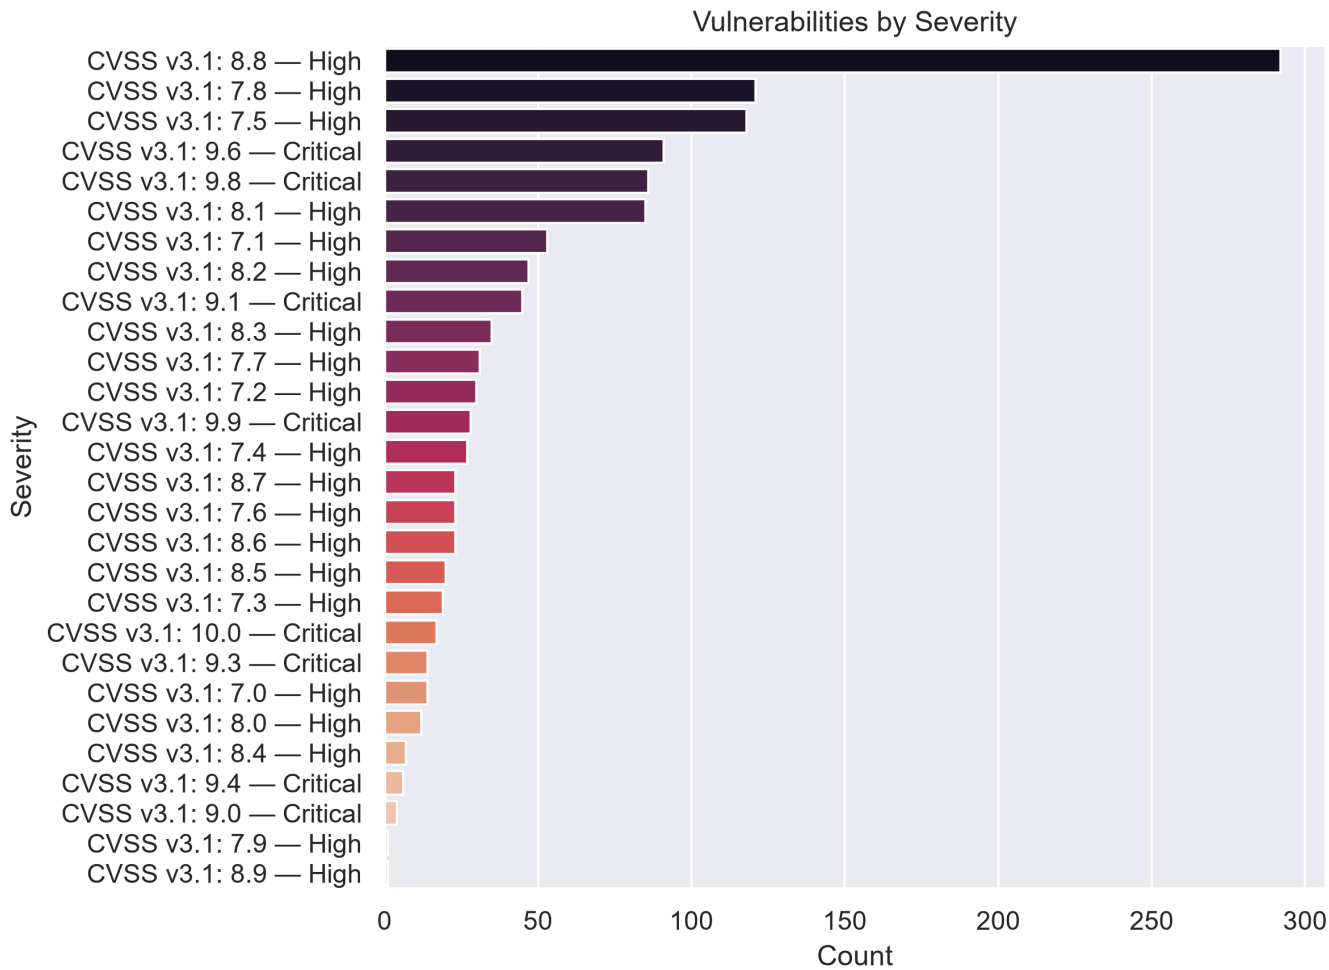

This report presents an empirical, evidence-based vulnerability intelligence audit covering technical vulnerabilities, exploit activity, and threat campaigns affecting Indian infrastructure and organizations.

Total Verified Records: 1273

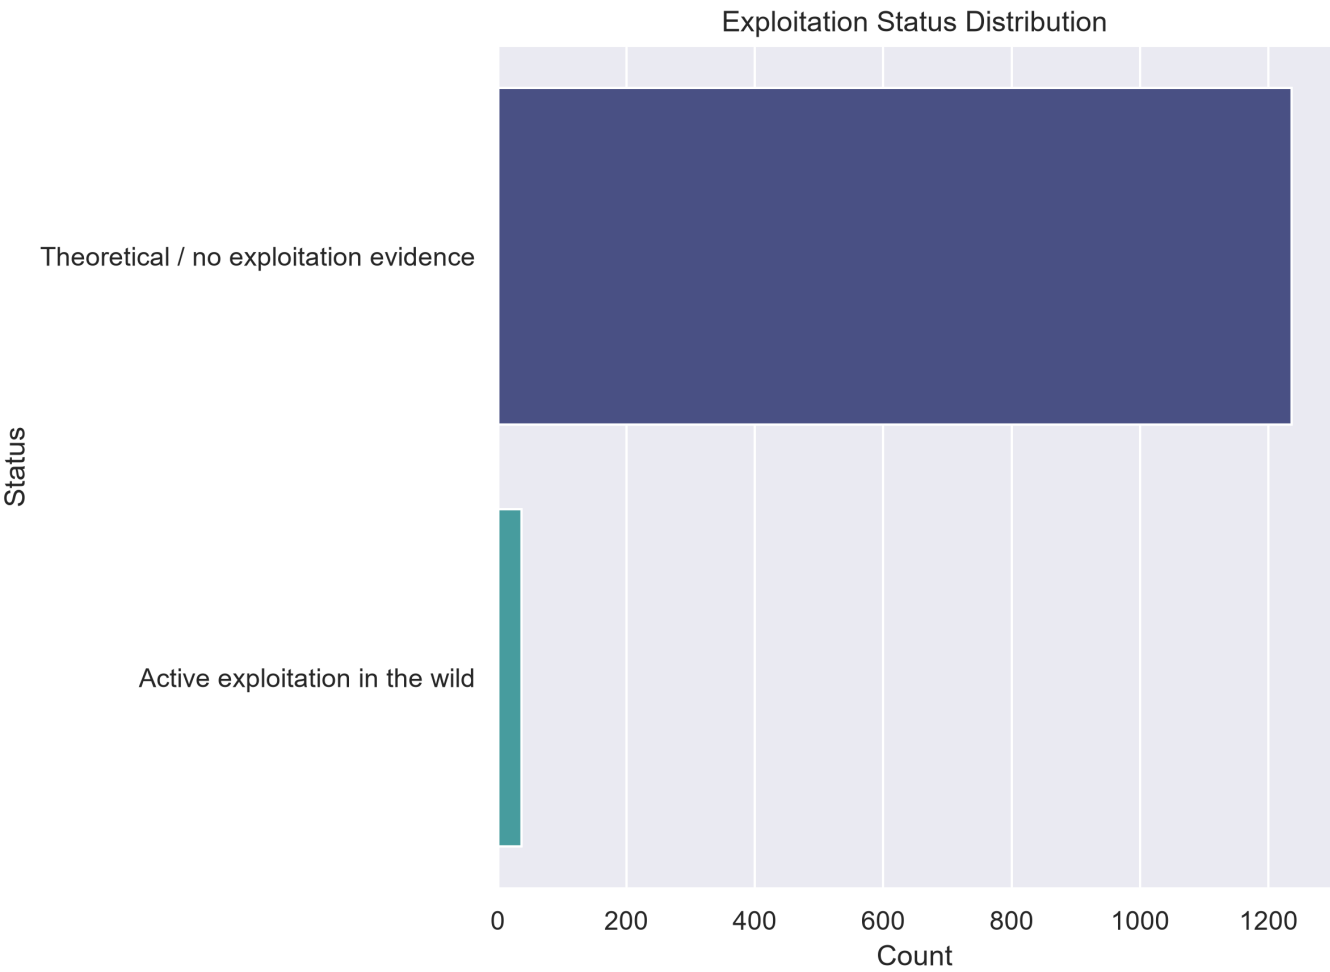

Active Exploitation Records: 37

Unique Vulnerabilities: 1273

Severity Analysis

Exploitation & PoC Analysis

Critical Vulnerability Priorities & Recommendations

Immediate Exposure Reduction:

Organizations must immediately patch actively exploited vulnerabilities (Level 3/4 Exploitation Maturity), particularly focusing on public-facing assets like Citrix, Fortinet, and Ivanti gateways which are under active targeting.

Detection & Hardening:

Implement exploit signatures for recent high-severity CVSS findings and enforce MFA across all external access vectors.
